

While global growth for mobile handsets will remain strong from 2009 to 2014, the global market for professional wireless information is also expected to maintain double digit growth from 2009 to 2012. Mobile handset growth will be driven by **Asia**, Europe & the Middle East; and North America's business and consumer demand to access entertainment and information from anywhere and at anytime. Technological innovation and industry competition will continue to increase the sophistication of applications and types of data that can be accessed from wireless devices. Among professional users, legal and health care practitioners will continue to demand the majority of wireless information products and services while the global professional wireless information market is projected to exceed **\$1.3 billion USD** in 2010.
